
items × roles
4 items per session
d^2-1 reals per role
$G(\omega)$, $\{t_k, s_k\}$
$I_{ab} \geq \theta_c$
text
Evidence stream
Extract
small model: role, direction, strength
Update
rotate $U(\theta)$, review or commit
Drift
toward default, schedule filter
Coordinate
feedback $u = gy$ across roles
Answer
ideal model reads state
Stage 1
Stage 2
Stage 3
Stage 4
Stage 5
(a)
Logged signals
environment $G(\omega)$
Review schedule $\{t_k, s_k\}$
review filter $F_\tau(\omega)$
$\int GF$
sets Stage 3
Drift rate R overlap law
resonant: reviews slow drift (Zeno)
detuned: reviews near τ_c speed it up
white noise: no effect of timing
(b)
updated $\rho_{r,l}$
Feedback
$u = gy$
Drift
toward $|d\rangle$ at rate R
Reminder
$V(\varphi)$, optional
Review / commit
$M_\pm$ or Lüders
Rotate
$U = e^{-i\theta G/2}$
state $\rho_{r,l}$
+ timestamp
(c)
small model (LLM tokens)
ideal model (LLM tokens)
plain code, no tokens
optional control
